Phishing Scams: Phishing is a form of social engineering that attempts to steal sensitive information. An attacker's goal is to compromise systems to obtain usernames, passwords, and other account and/or financial data. They most frequently accomplish phishing attacks via email. The attacker sends crafted emails to people within an organization. The email usually pretends to be from someone trustworthy, like your bank, UPS/FedEx, a credit card company or an airline, or some other site for which you may have login credentials. The email includes a link to an "official" website that is actually a fake site operated by the attacker. Once the user visits the fake site, they may be asked overtly to enter account information such as usernames, passwords, credit card details, social security or bank account numbers. If done correctly, the attack can capture sensitive information without the victim even knowing that they have been compromised.
